

Report
Of
GOOGLE AI/ML INTERNSHIP

Submitted
To
School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech CSE

By
Roll Number of Student: 2410031670
Name of Student: RHYTHM BHARTI
Section: 3CSE9
Semester: 5th Semester
Batch: 2024-28

2024-28

CANDIDATE’S DECLARATION

I, RHYTHM BHARTI, do hereby declare that the internship report titled “GOOGLE AI/ML INTERNSHIP” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Student Name: RHYTHM BHARTI

Roll No.: 2410031670

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I express my gratitude to my parents for their blessings.

Student Name: RHYTHM BHARTI

Roll No.: 2410031670

INTERNSHIP COMPLETION CERTIFICATE

[ATTACH ORIGINAL INTERNSHIP COMPLETION CERTIFICATE HERE]

4. PROJECT DESCRIPTION

4.1 Introduction

The Google AI/ML Internship is documented as an academic internship report focused on learning and applying concepts related to Artificial Intelligence and Machine Learning. The report presents the internship work in a structured manner, covering the organisation profile, problem statement, objectives, scope, technologies and tools, system architecture, methodology, expected outcomes, and supporting completion evidence.

4.2 Organization Profile

The organisation profile section will contain the official description of the internship provider, its areas of work, and the role or learning track undertaken during the internship. The final version should be completed using the official internship documentation so that organisation-specific facts are represented accurately.

4.3 Problem Statement

The internship work is concerned with understanding and applying Artificial Intelligence and Machine Learning concepts in a practical learning environment. The central problem is to translate theoretical concepts into structured, reproducible practical work while understanding the tools, workflows, model development stages, and evaluation considerations used in AI/ML.

4.4 Project Objectives

- To understand fundamental concepts and workflows used in Artificial Intelligence and Machine Learning.
- To gain practical exposure to AI/ML tools and development environments.
- To understand the stages involved in preparing data, developing models, and evaluating results.
- To document the internship learning and practical work in a systematic academic format.
- To develop a foundation for applying AI/ML techniques to future academic and professional projects.

4.5 Scope of the Project

The scope covers the learning, experimentation, implementation, documentation, and evaluation activities undertaken as part of the AI/ML internship. It includes the technologies and methodologies actually used during the internship and the

academic outcomes obtained from the work. Specific project modules, datasets, model results, screenshots, and certificates will be added from the internship evidence in the final version.

4.6 Technologies and Tools Used

The final report will list only the technologies and tools confirmed by the internship work and supporting evidence. The section is intended to cover the programming environment, AI/ML libraries or platforms, development tools, datasets, and supporting services used during the internship.

4.7 System Architecture

The system architecture section will present the flow of the internship project from input/data preparation through processing, model development or AI/ML operations, evaluation, and output. A project-specific architecture diagram should be inserted here after the exact implementation workflow is confirmed.

4.8 Methodology

The methodology will follow a structured AI/ML workflow: understanding the problem, collecting or preparing relevant data, preprocessing where required, selecting an appropriate approach, developing or applying the model, evaluating the results, interpreting the outcomes, and documenting the findings. The final report will be aligned with the actual internship activities rather than adding unsupported steps.

4.9 Expected Outcomes

The expected outcomes are improved practical understanding of AI/ML concepts, familiarity with the tools and workflow used during the internship, experience in documenting technical work, and a clearer understanding of how AI/ML methods can be applied to practical problems.

4.10 Certificates of Completion and Other Communication Mail Proof

Copies of the internship completion certificate and relevant official communication or mail proof must be attached in this section, as required by the prescribed report format.

5. BIBLIOGRAPHY / REFERENCES

1. Official internship materials and learning resources provided during the Google AI/ML Internship.
2. Official documentation and reference material for the tools and technologies actually used during the internship.
3. Additional sources cited in the final technical work, to be formatted consistently in the final report.
